PhET-iO Diff

A PhET-iO simulation can export its API as a JSON object, which includes all of the PhET-iO elements as well as the types and methods for each. This wrapper loads the API for two versions of the same simulation and performs a diff on the corresponding JSON. To start, specify the URL of another version of this simulation, and press "Compare". The URL can be the wrapper landing page (the `simulation/version/` directory), the simulation HTML file, or the phet-io.js lib file.

Old sim: http://localhost/GQ_old/graphing-quadratics_all_phet-io.html?postMessageOnError

This is the reference sim, which shows any differences in red.

Sim type: New ⦿ Old ○

New sim URL: http://localhost/graphing-qua [Compare]

New sim: http://localhost/graphing-quadratics/build/phet-io/graphing-quadratics_all_phet-io.html?postMessageOnError

This is the compared sim, which shows any differences in green.
